

<b>Georg-August-Universität Göttingen</b> <b>Universität Kassel/Witzenhausen</b> <b>Module M.SIA.A02M: Epidemiology of international and tropical animal infectious diseases</b>	6 C 4 WLH
<b>Learning outcome, core skills:</b> Based on a scientific and practical up-to-date level, students know to evaluate and develop modern and effective livestock hygiene and husbandry concepts and to integrate them into complex quality management programs. Graduates are trained to be competent in implementing and communicating their knowledge in a multidisciplinary occupational setting that establishes epizootic control programs.	<b>Workload:</b> Attendance time: 84 h Self-study time: 96 h
<b>Course: M.SIA.A02M.C Epidemiology of international and tropical animal infectious diseases (Lecture, Exercise)</b> <i>Contents:</i> Infectious diseases play an enormous role in international animal health control. National health and veterinary authorities, as well as international organizations (WHO, FAO) are very much involved in the surveillance of epidemics and establishment of health and hygiene monitoring programs. These efforts will increase in future, because of a further globalization of international markets, and will require well-educated experts collaborating worldwide in this multidisciplinary field. This module will give a generalized view of current epidemics together with a specialized understanding of infectious diseases and hygienic programs in subtropical and tropical countries. Characteristics of the biology of relevant infectious agents like parasites, fungi and bacteria together with their toxins, viruses, and prions will be presented in detail. Some of these germs included in this unit cause severe zoonotic diseases with a lethal danger for humans. Immunological host-defence mechanisms of wild and domestic farm animals against pathogens will be discussed together with modern strategies of active and passive immunizations. Diagnostic methods presently available and new biotechnological approaches in future assay and vaccine development will be demonstrated. The adaptation of practical health and standardized quality management processes to various animal production systems (ruminants, pigs, poultry) and the corresponding management measurements will be explained. The view will deeply focus on environmental impacts (water, soil, air hygiene), epizootiology and modern tools in epizootiological research. It will include biology and eradication of vectors (insects, ticks) transmitting pathogens of animal and zoonotic diseases, as well as biological and chemical methods for vector control. In the laboratory course, this module will also communicate well-established techniques of microbiological and parasitological diagnostics. Students will be practically trained in classical methods and in modern biochemical, immunological, biotechnological and molecular biological techniques for the detection of infectious agents, toxins and noxious substances. Tissue culture procedures for vaccine or antibody development are also used. Modification of livestock-environment interactions through human management are discussed.	4 WLH
<b>Examination: Oral examination (approx. 90 minutes)</b>	6 C

<p>M.SIA.A02M.Mp: Epidemiology of international and tropical animal infectious diseases</p> <p><b>Examination requirements:</b>                  Knowledge of current veterinary epidemic and infectious diseases inclusive emerging diseases. Background of hygiene and eradication programs. Profound knowledge in important infectious agents (parasites, fungi, bacteria, viruses) as well as toxins and prions. Skills in immunologic defense mechanisms of wildlife, zoo and domesticated animals in connection with modern active and passive vaccination strategies and biotechnological vaccine development. Knowledge in modern diagnostic tools as well as in biology and control of biological vectors (ticks, midges).</p>	
<p><b>Admission requirements:</b>                  none</p>	<p><b>Recommended previous knowledge:</b>                  Basic knowledge (B.Sc. level) of soil, plant and animal sciences</p>
<p><b>Language:</b>                  English</p>	<p><b>Person responsible for module:</b>                  Prof. Dr. Jens Tetens</p>
<p><b>Course frequency:</b>                  each winter semester; Göttingen</p>	<p><b>Duration:</b>                  1 semester[s]</p>
<p><b>Number of repeat examinations permitted:</b>                  twice</p>	<p><b>Recommended semester:</b></p>
<p><b>Maximum number of students:</b>                  30</p>	
<p><b>Additional notes and regulations:</b>                  Literature:                  Lecture based materials.</p>
