

Georg-August-Universität Göttingen		3 C 2 WLH
Module B.Phy.5668: Introduction to Computer Vision and Robotics		
Learning outcome, core skills: After successful completion of this module, will be familiar with <ul style="list-style-type: none"> • the basics concepts of artificial intelligence (AI) and robotics, • the basics concepts of machine learning (ML), • the basic concepts of computer vision (CV), and • low level hardware components and their functions. 		Workload: Attendance time: 28 h Self-study time: 62 h
Course: Introduction to Computer Vision and Robotics (Lecture) <i>Contents:</i> <ul style="list-style-type: none"> • PID Controller, • Kalman Filter and Extended Kalman Filter, • SVM, Centroid, Perceptron, Neural Networks und Deep Neural Networks, K-Means, A*, Q-Learning, • Particle Filter, • SLAM, • Smoothing and Median Filtering, Bilateral Filtering, Non-Local Means, • Connected Components, Morphological Operators, • Line Detection, Circle Detection, Feature Detection, • Advanced image segmentation algorithms, and • Evaluation of machine learning methods 		
Examination: Written examination (90 minutes) Examination requirements: The students must be able <ul style="list-style-type: none"> • to repeat the contents of the lecture, • to design a robot control algorithms, and • to identify and understand low level hardware components as robot sensors and actuators. 		3 C
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: Prof. Dr. Florentin Andreas Wörgötter	
Course frequency: each winter semester	Duration: 1 semester[s]	
Number of repeat examinations permitted: three times	Recommended semester: Bachelor: 5 - 6; Master: 1 - 2	
Maximum number of students: 40
